

Problem 22	Unproductive operation of the gas turbine station
The essence of the problem	The station is utilized at 1/3 of its capacity due to the lack of sales of excessive electricity.
Technological parameters	The gas turbine station with an operating capacity of 10 MW of electricity production is operating at 1/3 of its capacity, which is sufficient to supply electricity to the entire field and the nearby village.
Scale of the problem	Excessive production of electricity while producing more gas.
